**1.2 VOLUME II MANUAL ORGANIZATION**

The organization plan for this preliminary manual is intended to better assist the technician to quickly locate, identify, repair or replace defective parts, assemblies, cables, etc. The arrangement is such that mechanical drawings (sketches) and exploded views of the major units in company with parts listings (Section 2) will help to identify the Wang Part # in the Bill Of Materials listings in Section 3. Section 4 will include all the available electrical drawings for PCBs, cable assemblies, and interconnecting diagrams. Section 5 contains a complete listing of all critical and compatibility ECNs required to bring the 928 Systems 20 and 30 up to their required E-REV levels.

**1.3 MECHANICAL AND ELECTRICAL DRAFTING NUMBER ASSIGNMENT  
(928 NOMENCLATURE)**

Table #I contains a list of BASE numbers assigned for the 928 models listed. BASE numbers 6840, 6841 and 6843 have been assigned to the Master, Work Station and Daisy Printer respectively. Base #6846 has been assigned to all 928 furniture (accessories). A typical number would be:

**B6840-XXX**

**B = Drawing size**

**6840 = Base # for Master CPU**

**-XXX = A specific assembly/part**

## SECTION 2

### EXPLODED VIEWS OF UNIT CHASSIS AND 928 FURNITURE WITH PARTS LISTINGS

#### 2.1 INTRODUCTION

This section contains orthographic projection drawings of the 928 major basic units and the associated furniture used with these units. Some of the furniture is required and some is optional. For example, the Master CPU 5530 is housed in Table Model 5590-2 and attached to Table stand 5590-5 which houses the 10 megabyte hard disk drive.

Exploded views of the unit chassis and furniture sections are included to help the serviceman assemble and disassemble these units as well as identify parts and subassemblies. Associated with these drawings are parts lists for easy identification when assembling or replacing defective parts. The individual parts listings for each assembly have an ITEM number which corresponds to a Wang Part # for identification. See BOM listings for a double check in Section 3.

The drawings are arranged in the following order:

#### 2.5 ACCESSORIES (FURNITURE)

Furniture accessories are included in this manual for the purpose of assembling furniture that has been shipped in kit form. Identification of parts in the assembly process are included on the parts listings. The master table for System 20 and 30 Model (5590-2) is shown with two different exploded views in Figures 2-11 and 2-12. The Printer table Model (5590-4) is shown in an exploded view with table top and paper racks (Figure 2-4). The Work Station table Model (5590-3) is not included, however, it is similarly assembled with many of the same parts used for the printer. (Refer to BOMs Section 3 for the complete list of parts required to assemble each of these models.)

ELECTRONIC CHANGE NOTICES

5.1 INTRODUCTION

Section 5 is dedicated to 928 Electronic Change Notices (ECNs). Because of ongoing changes to 928 Systems for updating and reliability purposes, it has been decided that Section 5 will be arranged for periodic updates. These updates will be sent to each and every area that has been issued a copy of the Preliminary 928 Volume II Manual. These updates will be in the form of an addendum that can be inserted by page numbers that will maintain the present arrangement of ascending ECN numbers that can be easily located by the user. Table 1 contains a complete listing of ECNs and the PCBs affected. Table 1 page will change each time the ECN listing is updated.

5.2 "INFORMATION ONLY" and "TO BE EXECUTED" ECNS

The ECNs included in this volume are republished from previous documents, ISN #127, WPNL #3, #11, and supplemented with the latest ECNs. The details of each ECN discussed fall into one of two categories "INFORMATION ONLY" and "TO BE EXECUTED".

<u>ECN:</u>	<u>PCB #</u>	<u>DESCRIPTION:</u>
5775	7206	<p>Substitution of zeners with better tolerance specification (Master unit requires 2% tolerance).</p> <p>Delete: Two 380-2047 (1N750A, 4.7V zener) Add: Two 380-2048 (1N5250B, 4.7V, 1/2 W zener)</p>
		<p>Delete: One 380-2110 (1N4741, 11V, 1 W zener) Add: One 380-2111 (1N5241B, 11V, 1/2 W zener)</p>

5947	7201	<p>Change PROM IC from 378-2029 R2 to 378-2029 R3. This PROM must be used with Software 7.0 or above. ECN's 5944 (7204) and 5948 (7202) are required with this ECN. This change does not increment the electronic level of the board.</p>
6228	7201	<p>Change PROM from 378-2029 R4 to 378-2029 R5.</p>

#### REASON FOR CHANGE

- 1) Allows System 20 software to run on System 30 with minimal changes.
- 2) If the floppy door is open during disk operation, system will not hang-up.

NOTE: All System 30 units must have REV 5 chip.

<u>ECN:</u>	<u>PCB #</u>	<u>DESCRIPTION:</u>
6330	7205	This change will only be performed on future units and does not have to be done in the field on existing units.
[2]		

REASON FOR CHANGE

To make System 20 and 30 master chassis universal.

Artwork/Loading Sketch/Schematic/Design Change.

Add a jumper wire from pin 6<sub>1</sub> to L61 pin 10.

\*This ECN is to be performed simultaneously with ECNs 5834 and 5944. ECN 5874 duplicates the addition of a jumper that was to be performed on ECN 5834. This step is only performed once in the procedure listed with ECN 5944.

#### REASON FOR CHANGE

Design improvement.

5876

7067

[1]

PCB 7067 was originally designed for use in the display unit - Model 2200F. It was adopted for use in the 928 system Model 5526 (work station). ECN 5876 brings the board to E REV LEVEL 1 because of changes listed below:

5876

7067

Cont.

1) Change R16

FROM: 1KΩ Potentiometer WL #336-1014

TO: 2KΩ Potentiometer WL #336-1022

2) Change R17

FROM: 5.6 KΩ Resistor WL #330-3056

TO: 5.11 KΩ Resistor WL #333-0088

REASON FOR CHANGE

Because of resistor tolerances -12VR voltage  
adjustment is marginal.

5877

7203

Artwork/Loading Sketch/Schematic/Design Change.

[2]

Perform the following operations on PCB 7203  
to bring the board up to E-REV LEVEL 2. ECN  
#5835 will be installed with this change.

Refer to Figures 5-4 and 5-5.

\*PCB 7203 ECN's

5835 and 5877

## APPENDIX A

Appendix A contains conversion tables for many of the spares items used on the OEM Diablo Daisy Printer. Diablo part numbers are converted to WLI numbers. The conversion tables include Integrated Circuit part numbers, mechanical parts and assemblies, extracted from the Diablo Series 1300 HY-TYPE II Printer Parts Catalog (Publication #82404-01). Some of the parts listed on these tables are not yet included in the Customer Engineering Field Price Catalog (03-0022-2).

OEM (Diablo) conversion to WLI# is easily recognized by Wang's Parts Class number 726-XXXX and specifically by Vendor Class (VC) 20 in the Field Price Catalog. These sources afford an adequate cross reference with prices to expedite the ordering process for the Daisy Printer.

SECTION 4  
SCHEMATIC AND CABLE ASSEMBLY DRAWINGS

4.1 SCHEMATIC DRAWINGS

4.1.1 MASTER CPU (MODELS 5520 AND 5530)

The Master units for WP systems 20 and 30, Models 5520 and 5530 respectively, each use the same Printed Circuit Boards (PCBs) with one exception - (The Master Data Link PCB). However, certain boards must contain certain ECNs to allow them to be interchangeable; these minimum electronic levels are listed below.

Interchangeable PCBs

7201 Master Memory 0  
7202 Master CPU 2  
7203 Master Disk Control 5  
7205 Motherboard 2  
7206 Master Power Supply Regulator 1

NOTE:

Section 5 contains all ECNs that were implemented to make the above listed PCBs compatible and interchangeable for use in both Systems 20 and 30.

Non-Interchangeable PCBs

7204 Master Data Link (used only with Model 5520)  
This PCB was produced for the early System 20 and is no longer in production - superseded by 7214.  
7214 New Master Data Link (6 Channel) (used only with Model 5520)  
(7214 is interchangeable with 7204 on Model 5520)  
7214-1 Master Data Link (14 Channel) (used only with Model 5530)  
(7214-1 is interchangeable with 7204 and 7214 for interim repair. Conversely 7204 and 7214 can serve for limited 6 channel operation in Model 5530)

NOTE:

The 7214-1 PCB is the 7214 plus the additional 8 channels. See schematic 7214 (sheet 5 of 7) for added ICs when used as 7214-1.

Master Rear Panel assemblies for 6 channel and 14 channel operation are wired with twisted pairs to finger board 6703. 6703 connects to the Data Link PCB internally. These two assemblies can be identified by part numbers listed under Master cable assemblies, paragraph 4.2.1.

#### 4.2 CABLE ASSEMBLY DRAWINGS

Cable assembly listings for all units include mainly those cables that are involved in the assembly and disassembly of units where damage or loss can occur. Harnesses are not included.

Cable assembly drawings for the 928 System only, are assigned the same BASE number as the unit in which it is installed. Other BASE numbers will be indicated such as 6482 which covers general cable, wire and lug assemblies, etc. See cable listing below:
