

NAME

umount — dismount file system

SYNOPSIS

umount special ...

DESCRIPTION

Umount announces to the system that the removable file system(s) previously mounted on special file *special* is/are to be removed.

SEE ALSO

mount(1), umount(2), mtab(5)

FILES

/etc/mtab mounted device table

DIAGNOSTICS

Frequently, in the case of /usr, the file system is found to be busy because one of the Shell accounting files (/usr/adm/sh_acct or /usr/adm/su_acct) is open for some Shell or system accounting is active (/usr/adm/acct).
