

NAME

isdemand, issched, isspinoff, isbackgrd - execution environment

SYNOPSIS

isdemand()

issched()

isspinoff()

isbackgrd()

DESCRIPTION

All routines reference the environment variable `EX MODE` to retrieve the execution mode. In all cases, the returned value is either 0 to represent a 'no' condition or 1 to represent a 'yes' condition.

isdemand indicates if execution initiated from a terminal.

issched indicates if execution initiated by the SCCS Scheduler.

isspinoff indicates if background execution initiated from a terminal.

isbackgrd indicates if execution is either of the scheduled or spinoff case.
